

Career Paths: Bootcamp Reflection

Task

First “Make A Copy” of this doc and save it into your own Drive. Save it as “Bootcamp Reflection - {Your_Name}”. Then scroll down to the below questions and talk them through with your buddy.

*Once you have discussed the questions through, write down your answers beneath. Remember there are no right or wrong answers! This document is primarily for **you** and is a useful way of honing your thinking.*

To help you separate the different parts of the bootcamp, you can use these modules:

Web Development Bootcamp:

- *Backend Development (Ruby, OOP, Databases)*
- *Frontend Development (HTML, CSS, Javascript, building a UI)*
- *UI Design (designing on Figma,*
- *Fullstack Development (Rails, building full feature frontend and backend)*
- *Product Management (managing team, roadmap of features to build, user journey)*
- *Product Ideation (product pitch, building initial roadmap)*

Data Science Bootcamp:

- *Programming basics and databases (Python, SQL)*

- *Data Analytics (Jupyter Notebook, Pandas, Numpy, Matplotlib)*
- *Decision Science (Exploratory Data Analysis)*
- *Machine Learning (Data Preprocessing, Modelling, Performance measures, Pipelines)*
- *Deep Learning (Neural Networks, RNNs, CNNs, NLP)*
- *Data Engineering (Packaging, Google Cloud Platform, MLFlow, Flask API & Heroku)*
- *Projects (Team Management, project roadmap creation, model iteration)*

When you are finished export your answers to PDF and upload them to the Learn assignment.

Questions

1. What module(s) of the bootcamp did you enjoy the most? And why? 🥰 Feel free to pick more than one.

The project weeks were by far the most fun! Probably also because I was part of a really good group. And by week seven/eight/nine things are more fun because the skills we had learned came together.

2. What module(s) of the bootcamp were you best at? 💪 (This might be the same as the question before or completely different)

For now probably the front-end modules because those were more intuitive. But during the project weeks my desire to further indulge in back-end grew with the functionalities I/we built.

3. Would you like to code every day in your job? 🖥️ (Don't worry if you're answer is no!)

Probably not EVERY day but frequently and consistently.

4. During the Career Paths presentation, what job sounded the most interesting to you? 🤔

- Fullstack developer
- freelancer
- Product manager
- Founder
- Tech consultant

5. Based on your previous answers, what do you think would be the most interesting career path? ❤️

Any of one those! Probably founder!
